

A Proposal for the Howard Property

1320 Baldwin Rd, Ojai, California · ~44 acres

Prepared for **Howard** by **Paul Muresan** · August 2026

*“You said you would love to see agriculture happen on this land —
and asked for ideas. This is mine.”*

Explore this property on the interactive map: **howard-property-dev.vercel.app** — the **Today** toggle shows the property exactly as it is; the **Vision** toggle shows the proposed potential. Press the 3D button to fly the land in three dimensions.

Dear Howard,

Thank you for the openness you have shown — both with your land and with the idea that something meaningful could grow on it. You mentioned you would welcome agricultural projects and asked for ideas. I have taken that invitation seriously. This document, and the interactive map that comes with it, are my answer.

First, who I am. I am a property developer and a software developer, an entrepreneur and a builder — a creative mind that likes to make things real. I develop land and I develop technology, and my favorite work is where the two meet: regenerative projects that are planned well, built by hand, and documented beautifully. The living 3D map of your property that accompanies this proposal is a small taste of how I work.

My situation is simple: I am transitioning from my current base on Sulphur Mountain and I am looking for my next home — not just a place to stay, but a place to pour myself into. When I think about where the next years of my energy should go, I keep coming back to your 44 acres on Baldwin Road.

What I See in Your Land

Raw land is potential in its purest form. Your property has water possibilities, sun, good bones, and room for real agriculture — and it sits in a valley where regenerative projects thrive and neighbors pay attention to land done well. The full picture lives on the map, but the heart of it is agriculture-first: soil, food, and living systems, built in an order that makes each step pay for the next.

The offer	I develop your land — hands-on, phase by phase, at my cost in labor and craft
The ask	A home base on the land while I do it — starting small, growing only with your blessing
The spirit	Everything is a conversation. We build only what we agree on.

The Vision — Thirteen Projects, Agriculture First

Each of these lives as an icon on the interactive map — tap any of them to see its story, budget thinking, and place on the land. Positions are suggestions, not commitments.

Growing Systems

Hugelkultur Beds	Buried-wood raised beds that hold water through the dry season — first soil built
Property Nursery	Native + food-tree nursery; plants for the land first, sales later
Mushroom Cultivation	Container-based gourmet mushroom production — fast yield, small footprint
Beekeeping	Pollination for everything else + honey; quiet corners of the land
Livestock Rotation	Small rotating herd — fertility on legs, fire-fuel reduction
Compost Operation	The engine: turns ranch + community waste into the soil bank
Growing Dome	Year-round protected growing; seedlings and greens

Living & Community

Pond & Swimming Hole	Water feature restored for irrigation storage + summer life
Community Workshop	The existing studio grows into a real workshop — tools, repair, making
Community Hub	A small cob-style cabin — my proposed home base and the land's welcome point
Nature Gym	Simple outdoor training among the oaks
Sacred Spaces	Quiet places to sit with the land
Main House	Untouched — your home remains the heart of the property

How It Would Flow

Phase 1 · months 0–6	Arrive & prove: settle into the studio, first hugelkultur beds, compost running, nursery started. Small, visible, real.
Phase 2 · months 6–18	Grow: mushrooms, bees, livestock rotation, pond restored, workshop humming.
Phase 3 · 18+ months	Flourish: the full thirteen-project vision — a regenerative homestead that feeds and teaches.

Principles

- 1. Your land, your call.** Every project starts as a conversation and ends where you want it to end. Nothing irreversible happens without your explicit yes.
- 2. Phase by phase.** Each phase is small enough to stop, good enough to keep. I prove value before asking for more room.
- 3. Documented like software.** Everything gets mapped, photographed and written up — the interactive map stays living documentation of what we build. You will always know exactly what is happening on your land.
- 4. Agriculture first.** The order of work follows your wish: soil, water, food. The community pieces only grow around a working agricultural core.

What I Bring, Concretely

Hands: carpentry, earthworks, systems building, animal care. Head: project planning, budgeting, software, mapping, documentation — I built the interactive map and this whole platform myself. Heart: I am not looking for a landlord; I am looking for land to serve and a neighbor to build trust with.

Next Step

Walk the land with me. Bring this map on a phone — stand on the spots, move the icons where you feel they belong (the map lets us reposition everything live), and tell me what excites you and what does not. From there we shape Phase 1 together.
